

5 Things You Need to Know About Mechanical Joint x Plain End Adaptors Before Making Your Next Wall Pipe...

1.

All MJ x PE pieces are **drilled and tapped, then lined and coated** to meet strict AWWA standards.

2.

Threaded joints are **NOT** recommended for exterior/underground use. Make your wall pipers with a cast MJ x PE adaptor and **eliminate potential leaks. One less joint to test!**

3.

The MJ end is cast and the body is **fully machined** for easily threading the plain end of a flanged joint OR to slip on a water stop.

4.

MJ x PE pieces are cast in **1', 2' and 3' lengths** to meet most wall pipe lengths.

5.

These are solely made and supplied by UV; **not offered elsewhere!**

Internationally Made
